Wood Samples Company

WSC has been supplying wood samples for AWP, ASTM and EN Standard Test Methods for over a dozen years.

Staffed by professionals who know wood machining and have expertise in typical close tolerance sample production.

Although WSC supplies Southern Pine 100 percent sapwood samples to most of its clients, other specialty species can be procured should the testing laboratory wish to evaluate other materials.

Samples are guaranteed anti-sapstain chemical free and kiln-dried to uniform moisture content. Samples are cut and machined from sawmills that subscribe to environmentally sound, sustainable forestry practices.
